

# Building Capacity One Fellow at a Time

Because weather, water and climate affects us all

## Weather information is crucial...

... for developing and least developed countries to make informed decisions that affect not only their daily lives, but also their economic survival and resilience to natural disasters

## Lack of qualified personnel...

... means that the needs of local communities are not met, making them more vulnerable to the negative impacts of climate change

## Building capacity...

... through the WMO Fellowship Programme helps train personnel in the fields of weather, water, and climate as they are fundamental in ensuring valuable and relevant information is available

## A society...

...with a solid network of skilled and knowledgeable human resources has a better chance of improving food security, protecting human health and enhancing capacity to cope with natural disasters
